

Project Charter: Consumer Behavior Analysis

Date: 1 February 2026

1. Business Problem Statement

A leading retail company aims to better understand its customers' shopping behavior to improve sales, customer satisfaction, and long-term loyalty. The management team has noticed changes in purchasing patterns across demographics, product categories, and channels (online vs. offline). They are particularly interested in uncovering which factors—such as discounts, reviews, seasons, or payment preferences—drive consumer decisions and purchases.

Overarching Business Question:

"How can the company leverage consumer shopping data to identify trends, improve customer engagement, and optimize marketing and product strategies?"

2. Project Deliverables

- **Data Preparation & Modeling (Python):** Clean and transform the raw dataset for analysis.
- **Data Analysis (SQL):** Organize data into a structured format and run queries to extract insights on customer segments and loyalty.
- **Visualization & Insights (Power BI):** Build an interactive dashboard that highlights patterns and trends to enable data-driven decisions.
- **Report & Presentation:** Write a clear project report summarizing key findings and business recommendations.
- **GitHub Repository:** Include all Python scripts, SQL queries, and dashboard files in a well-structured repository.
